Summary

Full-Stack MERN & Next.js Developer with hands-on experience building AI-powered web applications using React.js, Next.js, Node.js, Express.js, and MongoDB. Skilled in developing secure REST APIs, authentication systems, responsive user interfaces, and integrating LLM APIs for intelligent features. Passionate about building scalable, production-ready applications and continuously learning modern web technologies.

EDUCATION

UAF, Bachelor of Science in Information Technology December2023– (Expected)July 2027

TECHNICAL SKILLS

Frontend:	React.js, Next.js, HTML5, CSS3, Tailwind CSS,
Backend:	Node.js, Express.js, MongoDB, Mongoose, REST APIs, JWT Authentication
AI Coding Tools:	GitHub Copilot, ChatGPT, Claude AI, Gemini AI,
Tools:	Git, GitHub, Postman, VS Code, Cursor

PROJECTS

RapidQuiz – AI-Powered Quiz Management System

- Developed a full-stack AI-powered quiz management system with separate Teacher and Student portals for creating, managing, attempting, and evaluating quizzes.
- Implemented AI-based automatic grading for descriptive questions using the Google Gemini API, providing marks and feedback based on teacher-defined evaluation criteria.
- Built features including quiz creation, MCQs and long-answer support, autosave, secure submission, result analytics, Excel export, and responsive user interfaces.
- Implemented secure teacher authentication, protected routes, quiz auto-save, and AI-generated feedback for descriptive answers.
- Tech Stack: Next.js, React.js, Node.js, Express.js, MongoDB, Tailwind CSS, Google Gemini API.

SmartKhata – Business Expense Tracker

- Developed a full-stack business expense tracking application that enables users to record, organize, and manage daily income and expenses through a clean and responsive interface.
- Implemented CRUD functionality for adding, updating, deleting, and categorizing financial records, helping users monitor business transactions efficiently.
- Built a RESTful backend with secure database integration to store and retrieve expense data, ensuring smooth and reliable record management.
- Designed MongoDB schemas and RESTful APIs for efficient expense management and persistent data storage.
- Tech Stack: React.js, Node.js, Express.js, MongoDB, Tailwind CSS.

TobaTravels – Railway Information & Live Train Tracking System

- Developed a railway information system that allows users to search Pakistan Railways schedules, fare details, and live train status through a responsive web interface.
- Evolved the application from a manually maintained timetable system to an integrated solution using the official Pakistan Railways website for real-time fare information and train updates.
- Implemented live train tracking for Toba Tek Singh Railway Station to help travelers monitor arrivals and departures.
- Improved the overall project from a static timetable application into a real-time railway information platform
- Tech Stack: HTML, CSS, Tailwind CSS, JavaScript.

Bank Transaction Management System

- Built a full-stack banking backend application by implementing industry-standard concepts including user authentication, account management, and secure transaction processing.
- Implemented features such as JWT-based authentication, password hashing with bcrypt, email notifications, ledger-based transaction tracking, idempotent transaction handling, and secure logout using token blacklisting.
- Applied production-oriented backend practices including MongoDB database sessions for atomic transactions, modular architecture, and RESTful API design.
- Tech Stack: Node.js, Express.js, MongoDB, Mongoose, JWT, bcrypt, Nodemailer.
